

Unified Operations Communication

STRENGTHEN AND SIMPLIFY OVERALL COMMUNICATIONS AND NOTIFICATIONS BETWEEN SCHOOL AND HOME

San Diego Unified
SCHOOL DISTRICT

Improve family engagement with **simple, secure, and centralized two-way communication** between school and families. Bridge the technology gap and reach all families by communicating in languages they speak at home and messaging on devices families are already using. Expand the notifications you can send, to include class updates, homework assignments, and district policy updates with picture and trackable PDF messages.

Engage Directly with Families

Engage in **two-way conversations** that create a partnership between school and home, allowing families to feel included and empowered to provide information about what support they may need to boost student outcomes.

Remove Language Barriers

Improve equity through communication and reach all families by **instantly translating all text messages** and emails into more than 60 languages, so that language barriers are no longer an issue.

Improve Efficiency and Productivity

Save administrator time and effort, and increase accuracy, by **eliminating manual and repetitive data entry** and retrieval of student data by seamlessly integrating with PowerSchool SIS and other products.

Provide Easy Family Access

Give the **convenience of using simple text messages** with devices they're already using, so you can reach more families and communicate faster.

Unified Operations Communication is a **game changer!** I can get in touch with absent students' families in one click. The ability to text message parents in their native language is critical, and Unified Operations Communication does the 'heavy translation lifting' for me. I love Unified Operations Communication! ”
